

KARA SMART – Flow

exclusive via ALPHA – CUBE Filters

As an innovative, highly dynamic manufacturer and technical consulting enterprise, we are glad and excited in order to present a revolution on the field of paint-separation to the highly esteemed visitors of the PaintExpo 2024.

Radical new ways of thinking paint-separation

In contrast to the common practice of the last decade, concerning nearby all other products on the current market, the KARA SMART – Flow series makes it possible to realize tremendous financial savings in a wide range of applications.

How?

By its heart and soul – the radical new way of construction, regarding the dry paint separators as a key-part of the whole plant. Not simply as a needed item-number. This makes it possible, to handle even fast drying sorts of paint much more efficient and easier. Measurements following international standards, making it easy to replace other cardboard-box dry-separators. Designed for flat, space-reducing shipping and easy instant self-assembling before use, as well as deliverable already assembled.

The opportunities? Exceptional!

I. Reduction of energy input

Due to the revolutionary way of construction, as well as the applied materials, the KARA SMART – Flow series realizes the application by a low level of pressure – drop values, starting around 20 p.a..

Uniquely handling business with a very flat curve of development of the p.a.-values, along a main part of its standing – time.

In objective comparison to the obsolete products of other manufacturers, KARA SMART – Flow separators enable groundbreaking financial savings, as a direct consequence of massively decreasing needed energy.

II. Extending standing-times and service intervals

Compared to other dry-separators being present at the current market, the possibility of an enormous extension of the standing-time is another unique feature of the KARA SMART – Flow products.

Up to three times longer changing intervals reduce the service-caused loss of production to a minimum. The individual potential of the spray-booth can be exhausted the best possible way.

Rates of growth can be realized in a larger frame, without any need of high financial invests in

additional space, spray-booths and staff.

III. Easy customization to individual needs

Following our philosophy and confidence, to regard every line of production and spray-booth as a whole and a result of its individual circumstances and needs, the customization of the KARA SMART – Flow separators is as efficient as easy, focusing on optimization of quality and costs.

By this our latest product series follows consequently the heritage of previous separators of our brand.

Fulfilling our daily aspiration and working hand-in-hand with our customers, we achieve the best possible results of quality, ecology and profitability.

Our consulting department is gladly available to visit potential new and current customers.

Uncomplicated, efficient and extremely fast - Turning today's challenges into the success of tomorrow.

In a nutshell: Our products reliably deliver, what other manufactures claim and promise since years.

**Individual. Ecological. Economic. KARA SMART – Flow series
