ALIT Technologies Will Attend PaintExpo 2022

ALIT Technologies is pleased to announce its participation at PaintExpo, the European hub for coating technologies.

ALIT Technologies, a specialist in machines and products for the chemical paint stripping of metals, will attend the 2022 edition of PaintExpo, to be held in Karlsruhe, Germany, from 26 to 29 April.

During the fair, ALIT will present Fastrip T2, the range of compact-sized paint stripping tanks equipped with ultrasound and integrated heating, and Fastrip T5, the medium-sized paint stripping tank with a capacity up to 800 litres.

PaintExpo 2022 will also be an opportunity to introduce visitors to the degree of specialization and know-how achieved by ALIT in the production of systems and products for the chemical paint stripping of iron, aluminium and silicone masking. The result of over ten years of experience and close collaboration with major players in various industries, from automotive to metal processing and coating.

All this has made it possible to develop a complete range of paint stripping systems that provide a solution to all process requirements. The range includes the aforementioned Fastrip T2 and T5, Fastrip ISP, the first and original inline paint stripping system; Fastrip S, the spray system for paint stripping, and Fastrip AP, the latest addition to the ALIT portfolio, developed for stripping aluminium profiles up to 8 meters long.

ALIT's know-how does not stop at plant design. In fact, the company was born as a manufacturer of paint stripping chemicals with the Metalstrip range, offering customers a high added value service: specific consultancy on the right product to be adopted based on the paint stripping machine in use and the process requirements. This entails a competitive advantage in terms of the useful life of the chemical product, process efficiency, repeatability of results and, last but not least, environmental sustainability.

ALIT Technologies looks forward to meet you at PaintExpo, Stand 3525, Hall 3.

ALIT Technologies

Specialists in the chemical paint stripping of metal surfaces and privileged partners of many high-technology industries, ALIT confirms itself as a champion in proposing innovative in-line chemical paint stripping systems and producing high performance and low environmental-impact products.

The Fastrip line up of machines by ALIT are industrial concepts that offer endless possibilities for customization. They integrate perfectly with the existing production lines or become a service in themselves. In addition, the certainty of a continuous consultancy over time and ALIT's Metalstrip product range optimize the machines performance.

From its headquarters in the Northeast of Italy, in the province of Verona, ALIT Technologies brings a long-awaited news for automotive, metalworking, and custom coating companies: they now can restore the parts that have been badly painted, effectively and at an affordable cost, without wasting time.
