

## **inSight - comprehensive software solutions for Industry 4.0**

i4Industry, specialized in developing customized software solutions in industrial coating segment, has launched a comprehensive visualization software that will make your work safer and more efficient.

The inSight software product reflects the needs of Industry 4.0 which enables customers to quickly reach their operational goals and improve production efficacy. inSight optimizes automated system processes and helps achieve significantly better results in the surface painting segment.

inSight features allow to better understand users' requests. As a result, it can be easily configured according to customers' needs and thanks to standardized interfaces can be integrated into IT environment.

The software is ideal for use in the industrial automation. It can be accessed remotely from any device, allows to send alarms or reports via email or GSM network and records the status of production process over time. inSight automatically comes with a service tablet and a module for allocating individual employees/operators to shifts and workplaces.

### **inSight smartControl**

Visualization software for operation of a particular area of the manufacturing process. inSight smartControl also offers the options of efficient management of production inputs and outputs, 2D or 3D barcode scanning, identification label printing, process operating manual displaying, and signalization using LED technology.

### **inSight IoT**

The IoT cloud platform ensures production management for line painting and surface finishing technologies. The platform primarily collects and saves IoT industrial data and then analyses and optimizes manufacturing processes and products. The platform also includes MES, Analytics and Warehouse modules.

All software solutions from i4Industry are already available for international market.
