

## Disolac Water Based is the new system that will transform the industrial paint market

*With the new system, Disolac takes a big step towards improving health and sustainability, maintaining the level of excellence that characterizes the brand focused on solutions for the industrial sector.*

Disolac, Roberlo's industrial coatings brand, introduces **Disolac Water Based**, the **water-based tintometric system specially for the industrial sector** designed to be more sustainable while also maintaining the excellence and reliability of the traditional Disolac system.

**Respect for the health** of professionals and the **environment** are two key elements that have been considered while developing Disolac Water Based. According to tests carried out in accordance with the UNE-EN 689 2019 standard, using this system reduces exposure to components harmful to human health and the environment, compared to conventional systems.

This water-based technology maintains the **same excellence in quality and efficiency** as the traditional system. In accordance with ISO 12944, it also provides the substrate with optimum **corrosion protection**, UV and chemical protection and ensures maximum durability with an impeccable glossy finish.

Disolac Water Based is a **hybrid system** that allows the different coating layers to be combined with a traditional system, offering the **versatility** required in each project.

Disolac Water Based is a complete system, offering solutions for any requirement and a personalized **technical service** that offers advice on the best solution for each project. It also has a **color service** that produces custom colors and makes use of **leading color** tools in the industry, such as color charts and iCrom color management software, with more than 19,000 formulas, which are updated periodically.

### **SAME APPLICATION, MORE SUSTAINABLE**

Disolac's new water-based system is used and applied in the same way as the traditional system. The sectors it can be used in are as wide as the number of surfaces to be coated: from structural coatings, refinishing of industrial vehicles and construction and agricultural machinery, to lettering and signage, to industrial maintenance and home maintenance.

### **A SYSTEM THAT'S CONSTANTLY GROWING**

Thanks to the R&D team that dedicates its efforts to researching and developing new technologies, the Disolac Water Based system is constantly growing, periodically incorporating new quality solutions that are reliable and long-lasting and meet the demands of the market.

## **ABOUT ROBERLO**

Roberlo, founded in 1968, is a family business specialized in the development, manufacture and sale of coatings and repair solutions for the refinish after market and industrial sectors.

Roberlo provides high quality and innovative solutions that respond to all market demands. State-of-the-art technology, close customer relationships and top service are three characteristics that best define the philosophy of this leading company.

With the aim of offering a totally adapted service and improving logistics, the company has 15 subsidiaries and 2 production centres (Spain and Brazil) where currently work more than 500 employees. Its global vision of the market is as well underlined by its wide commercial network spreading over 120 countries

In addition, the company has a highly professional Service and Technical Support Department, which provides training and assessment and transmits its knowledge to all clients and the various agents involved in the car refinish and industrial coatings sectors.
